EDUCATION

Grand Valley State University (GVSU) — M.S. in Artificial Intelligence (Expected Fall 2027) 01/2026 – Present
Grand Rapids, MI

- Awarded a **merit-based Graduate Assistantship** supporting M.S. study and AI research at GVSU.
- **Relevant Coursework:** Machine Learning, Data Mining, Computer Vision, Generative AI, MLOps, Cloud Application Development, High-Performance Computing.

University of Carthage, Faculty of Sciences of Bizerte — B.S. in Computer Science 09/2022 – 06/2025
Bizerte, Tunisia

- **Ranked first across all undergraduate years** of the Computer Science bachelor's program.

EXPERIENCE

Graduate Research Assistant — Remote Sensing & Vegetation Monitoring 01/2026 – Present
Grand Valley State University MI, USA

- Researching **vegetation-stress detection across 12,000 pixels in 4 parks**, using multispectral satellite time series to investigate scalable monitoring alongside drone observations.
- Built **Random Forest baselines and Presto-augmented models** to estimate expected NDVI and flag anomalies.
- Engineered **spatial and time-series data pipelines**, using 2022–2025 observations for training and validation and reserving a fully held-out 2026 test year for temporal evaluation.
- Developed **Google Earth Engine** scripts to export satellite observations and map pixel-level vegetation anomalies for investigation.

AI & Automation Intern 05/2026 – 08/2026
Asjai Lou Casting Remote / New York, NY

- Turned a static casting-industry book into a private digital platform with an authenticated member app, admin tools, and 181 directory records protected by collection-specific access controls.
- Implemented secure account activation with single-use keys, email verification, and transactional account creation; verified duplicate-order handling and refund revocation using synthetic orders.
- Built a Groq-powered RAG assistant with authorized retrieval, validated citations, and fallback handling; passed 65 automated checks and three hosted generation smoke tests.

AI & Mobile Developer 01/2025 – 12/2025
Smart It Partner Tunis, Tunisia

- Developed the **GymBox React Native app and BoxAI FastAPI backend**, integrating FAISS retrieval, Gemma-powered Q&A, and profile-based workout and meal recommendations.
- Built a **PyTorch computer-vision pipeline** for wildlife monitoring, classifying **10 forest animal species** with custom CNN architectures and data augmentation.
- Implemented **member screens, account flows, and shopping features**, connecting the app to backend APIs.

PROJECTS

1st Place Winner – Multiclass Image Classification Competition (Kaggle)
Python, TensorFlow, Keras, NumPy, Pandas

- Won 1st place in Kaggle's 10C-W26 challenge with a 3-CNN ensemble (WideResNet, ResNet-110) trained from scratch.
- Achieved 93.4% competition test accuracy on 16×16 RGB images; implemented CutMix, Mixup, label smoothing, and cosine learning-rate decay.
- Combined 2 pseudo-labeling rounds at 0.95/0.98 confidence thresholds, 15 TTA passes per model, and weighted ensembling.

GeoAgent — Agentic AI Research & Data Analysis Platform
Python, LangGraph, MCP, FastAPI, PostgreSQL, Docker

- Built a research workbench with LangGraph, MCP tools, retrieval, Python analytics, and SQL to analyze datasets and produce cited briefs.
- Designed **plan–review–execute–verify** workflows with persistent state, human approval, recorded tool outputs, and source-linked reporting.
- Built a **50-task evaluation harness** to assess task completion, tool selection, grounding, latency, and inference cost.

High-Performance Autoencoder Training
C++, OpenMP, AVX2/FMA

- Reached **#1 on the HPCBench leaderboard** with a **57.67× speedup**, reducing one training epoch from **55.72 s to 0.97 s** with verified correctness.
- Optimized training on **2700 single cell profiles** using sparsity, OpenMP, AVX2/FMA, cache blocking, mixed precision, and fused Adam updates.

Cost-Sensitive Healthcare Provider Fraud Detection
Python, Scikit-learn, Pandas, NumPy

- Built a fraud-detection pipeline for **5,410 providers** with **74 engineered features** from inpatient, outpatient, and beneficiary data.
- Evaluated LR, Random Forest, Gradient Boosting, and MLP across **200 model fits**, reporting a best mean **ROC-AUC of 0.946**.
- Implemented cost-sensitive investigation rules balancing reimbursement-weighted losses from missed fraud against investigation costs.

SKILLS

- **Languages:** Python, C++, Java, JavaScript/TypeScript, SQL
- **AI & Machine Learning:** PyTorch, TensorFlow, scikit-learn, Hugging Face, Computer Vision, Recommendation Systems
- **GenAI & Agents:** LLMs, RAG, LangChain, LangGraph, MCP, Tool Calling
- **Data & Geospatial:** Pandas, NumPy, Google Earth Engine, PostgreSQL, pgvector
- **Backend & Systems:** FastAPI, REST APIs, Docker, Git, OpenMP, SIMD
